Welcome to this new and unique initiative; a course in clinical research methodology offered through an academic rheumatology program.

Recent data and publications have made it necessary to familiarize the rheumatology and medical community about the strengths and weaknesses of databases and registries.

We hope to provide practical and useful information, an opportunity to ask questions of the key opinion leaders in clinical data collection and management as well as an interactive workshop where you can become familiar with the various tools available to rheumatologists and other clinicians for everyday patient monitoring and management.
